

Update on the Dengue situation in the Western Pacific Region

Northern Hemisphere

China (No update)

As of 31 October 2016, there were 1,840 cases of dengue reported in China in 2016. This number is lower than that reported during the same period in 2015 (Figure 1).

Figure 1: Number of Dengue cases per month, China 2012-2016
National Health and Family Planning Commission

Malaysia

In week 47, the number of reported dengue cases was 1,257, an increase from 1,201 cases (an increase of 4.7%) reported in the previous week. The cumulative number of cases reported in 2016 (94,337 cases) up to date, is less than that reported during the same period in 2015 (109,166 cases). As of week 45, the cumulative number of dengue deaths for 2016 was 220 cases, compared to 296 deaths during the same period in 2015 (Figure 2).

Department of Health, Australia

Pacific Islands Countries and Areas

French Polynesia (No update)

In week 42, 22 confirmed dengue cases were reported in French Polynesia (Figure 9). Four (18%) of the 22 cases were confirmed as DENV-1 infection.

Figure 9: Number of laboratory-confirmed cases of Dengue per week in 2015-2016, Centre for Occupational Health and Public Safety, French Polynesia

Papua New Guinea

From 1 January to 13 November, 81 imported cases of dengue with travel history to Papua New Guinea were reported by Queensland Health (Weekly Report on overseas acquired dengue notifications). Among these cases, 5 were DENV-1, 57 were DENV-2, 4 were DENV-3, 4 was DENV-4 and 11 cases were of undetermined serotype.

New Caledonia

As of 28 November 2016, 24 dengue cases were reported, and the number of cases has been decreasing since June 2016 (Figure 10).
