

## Update on the Dengue situation in the Western Pacific Region

### Northern Hemisphere

#### China

As of 30 September 2016, there were 1,482 cases of dengue reported in China in 2016. This number is lower than that reported during the same period in 2015 (Figure 1).

Department of Health, Australia

## Pacific Islands Countries and Areas

### French Polynesia

In week 42, 22 confirmed dengue cases were reported in French Polynesia (Figure 9). Four (18%) of the 22 cases were confirmed as DENV-1 infection.

Figure 9: Number of laboratory-confirmed cases of Dengue per week in 2015-2016, Centre for Occupational Health and Public Safety, French Polynesia

### Papua New Guinea

From 1 January to 23 October, 79 imported cases of dengue with travel history to Papua New Guinea were reported by Queensland Health (Weekly Report on overseas acquired dengue notifications). Among these cases, 5 were DENV-1, 57 were DENV-2, 4 were DENV-3, 2 was DENV-4 and 11 cases were of undetermined serotype.

### New Caledonia

In September 2016, 26 dengue cases were reported, and the number of cases has been decreasing since June 2016 (Figure 10).
