WPRO Dengue Situation Update, 7 August 2013

http://www.wpro.who.int/emerging_diseases/DengueSituationUpdates/en/index.html

Regional dengue activity is variable. Lao PDR, Malaysia, New Caledonia and Singapore have reported more cases in 2013 than 2012 for the same time period. The recent trend has increased in Malaysia, Philippines and Viet Nam. Dengue activity continues to be high in Lao PDR, although there have been indications of plateauing. WHO has been responding to the Lao PDR situation: http://www.wpro.who.int/outbreaks_emergencies/dengue.laopdr.june2013/en/

The recent trend decreased in Australia, Cambodia and Singapore and has declined to low levels in New Caledonia and the Solomon Islands. French Polynesia, however, has been experiencing increased dengue levels.

Table. Cumulative reported number of dengue cases in 2013 and 2012 (for the same time period), by country.*

	Recent trend**	Cumulative No. reported cases		2013/2012 ratio
		2013	2012	
Asia Sub-region				
Australia***	↓	1087	1194	0.9
Cambodia	↓	8796	18 420	0.5
Lao PDR	↓	30 166	2579	11.7
Malaysia	↑	15 400	13 162	1.1
Philippines	↑	76 354	81 509	0.9
Singapore	↓	13 670	2503	5.5
Viet Nam	↑	18 934	23 334	0.8
Pacific Sub-region				
New Caledonia	↓	10 488	226	46

*Dengue reporting systems vary by country and any change in the surveillance system over time is not reflected in the above figures. Number of reported cases listed for 2013 and 2012 are for the same time period for each year.

**Recent trend is based on the 3 week moving average for countries reporting by week and monthly comparisons for the last complete month for countries reporting by month.

***Australia: *Aedes aegypti* and *Aedes albopictus* are present only in Northern Queensland and Torres Strait Islands

Asia Sub-region

Australia: The monthly trend decreased from June to July 2013. 121 cases were reported for the month of July 2013, compared to 73 cases in July 2012. There were 1087 cases reported up to 31 July 2013.

Cambodia: The weekly trend has decreased based on the three week moving average. 875 cases were reported in the week 10 to 16 July 2013 compared to 2401 cases in the same week for 2012. There were 8796 cases (28 deaths) reported up to 16 July in 2013. **Lao PDR:** The number of cases reported remained

above the epidemic alert level but the weekly trend decreased based on the three week moving average. 3122 cases (2 deaths) were reported 20 to 26 July 2013 compared to 233 cases in the same period for 2012. 30 166 cases (76 deaths) were reported up to 26 July in 2013.

Malaysia: The weekly trend increased based on the three week moving average. 645 cases reported in week of 21 to 27 July 2013 compared to 325 cases in the same period for 2012. 15 400 cases (29 deaths) were reported up to 27 July in 2013.

Philippines: The weekly trend increased based on the three week moving average. 5165 cases reported in week of 30 June - 6 July 2013. 76 354 cases (306 deaths) were reported up to 27 July in 2013.

Singapore: The number of cases remained above the epidemic threshold but the weekly trend decreased based on the three week moving average. 306 cases were reported in the week of 21 to 27 July 2013 compared with 110 cases for the same period in 2012. 13 670 cases reported up to 27 July in 2013.

Viet Nam: Up to 20 June in 2013, there have been 18 934 cases (13 deaths) reported compared to 23 334 cases (2 deaths) for the same period for 2012. There were 5 301 cases (3 deaths) reported from 1-20 June 2013.

Pacific Sub-region

New Caledonia: Weekly trend decreased based on the three week moving average. 15 cases reported in week of 21 to 27 July 2013. 10 488 cases reported up to 27 July in 2013.

Solomon Islands: As of 17 July 2013, there were 6591 cases reported (125 additional cases from the previous report 2 weeks ago) with 8 deaths; numbers of reported cases continue to decline over the past weeks in affected provinces. Surveillance and response activities are still ongoing. For further information on the outbreak in Solomon Islands, refer to the outbreak report communicated through the Western Pacific Surveillance and Response Journal, "Ongoing outbreak of dengue serotype-3 in Solomon Islands, January to May 2013": <http://ojs.wpro.who.int/ojs/index.php/wpsar/article/view/206/308>

French Polynesia is facing a dengue epidemic. As of 26 July, there have been a total of 219 cases since February 2013. Serotype-1 has been identified in 139 cases and serotype-3 in 68 cases. Twelve cases were not serotyped.
