

Update on the Dengue situation in the Western Pacific Region

Northern Hemisphere

China

As of 13 June 2016, there were 154 cases of dengue reported in China in 2016. This number is higher than the number of cases reported in same period of the previous four years (2012-2015) (Figure 1).

Malaysia (No updates)

For the week from 17 April to 23 April in 2016, the number of dengue cases was 1,607, a decrease from 1,854 cases reported in the previous week. The number of cases was higher than that reported during the same period in 2015. Within the same period there were two dengue-related deaths reported, bringing the total number of deaths for 2016 to 94, compared to a total of 120 deaths during the same reporting period in 2015 (Figure 2).

Pacific Islands Countries and Areas

French Polynesia

From 23 to 29 May 2016, 65 confirmed dengue cases were reported in French Polynesia (Figure 9), including 4 requiring hospitalisation. 26 of the 65 cases (40%) were confirmed as DENV-1 infection.

Figure 9: Number of laboratory-confirmed cases of Dengue per week in 2013-2016, Centre for Occupational Health and Public Safety, French Polynesia

Papua New Guinea (No updates)

From 1 January to 5 June, 67 imported cases of dengue with travel history to Papua New Guinea were reported by Queensland Health (notifiable conditions data). Among these cases, 5 were DENV-1, 48 were DENV-2, 3 were DENV-3, 1 was DENV-4 and 10 cases were of undetermined serotype.
