Influenza Situation in Singapore 2016

Influenza indicators for E-week 34 (21 Aug - 27 Aug 2016) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 2,834 (over 5.5 working days) in E-week 33 to 2,687 (over 5.5 working days) in E-week 34.

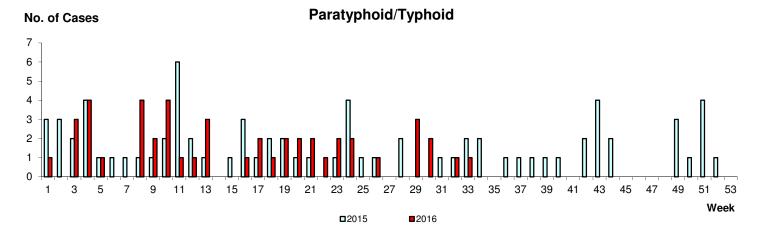

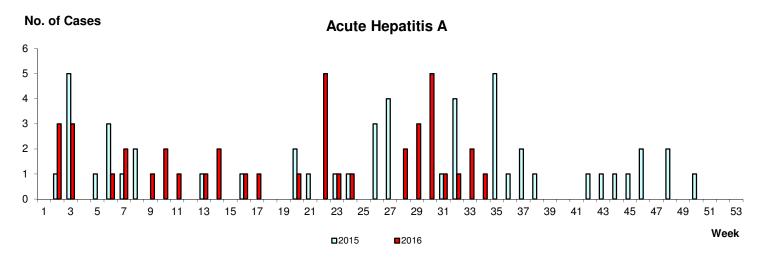

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 1.5%. The overall positivity rate for influenza among ILI samples (n=341) in the community was 43.7% in the past 4 weeks. Of the specimens tested positive for influenza in July 2016, these were positive for influenza A(H3N2) (88.7%), influenza B (8.1%), and influenza A (H1N1)pdm09 (3.2%).

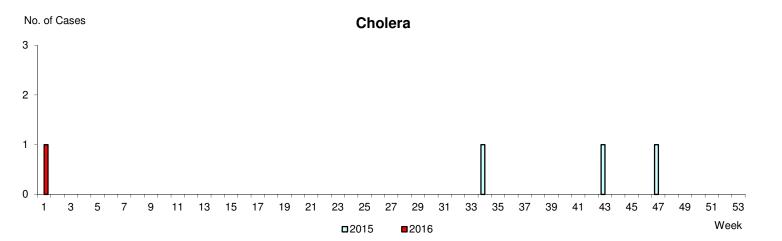

^{*} Based on influenza-like illness (ILI) samples from GPs and polyclinics
