Influenza Situation in Singapore 2016

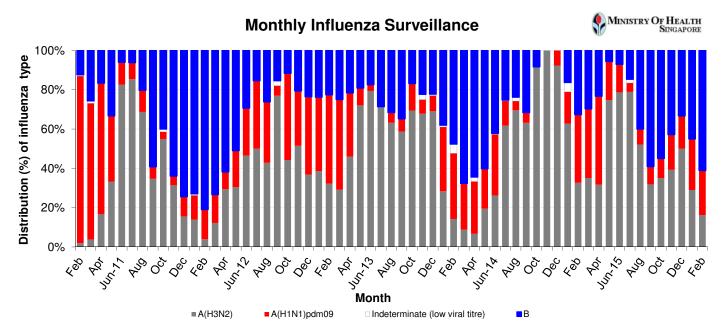

Influenza indicators for E-week 9 (28 Feb - 5 Mar 2016) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 3,148 (over 5.5 working days) in E-week 8 to 3,001 (over 5.5 working days) in E-week 9.

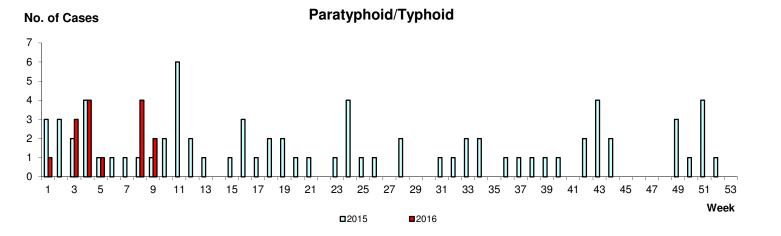

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at approximately 1%.

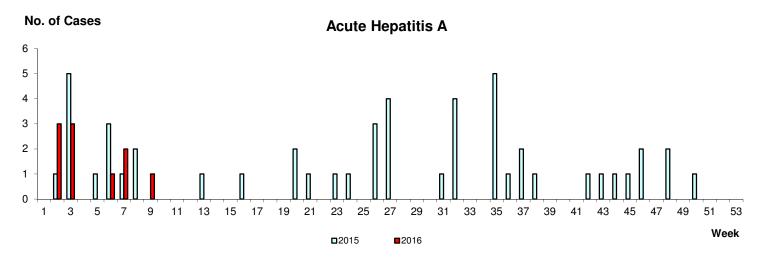

The overall prevalence of influenza among ILI samples (n=249) in the community was 66.7% in the past 4 weeks. Of the specimens tested positive for influenza in February 2016, these were positive for influenza B (61.1%), influenza A (H1N1)pdm09 (22.7%), and influenza A(H3N2) (16.2%).

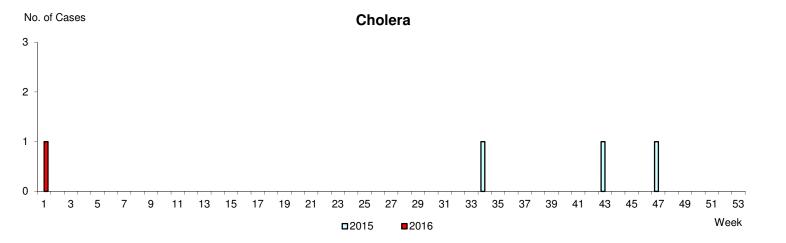

^{*} Based on influenza-like illness (ILI) samples from GPs and polyclinics
