<sup>\*\*\*</sup> Wef E-week 6 of 2012, the no. of polyclinic attendances will be reflected on an average daily basis, instead of weekly basis, so as to take into account the number of working days in an E-week at the polyclinics for a more accurate representation of the underlying trends in the community.

#### **Influenza Situation in Singapore 2013**

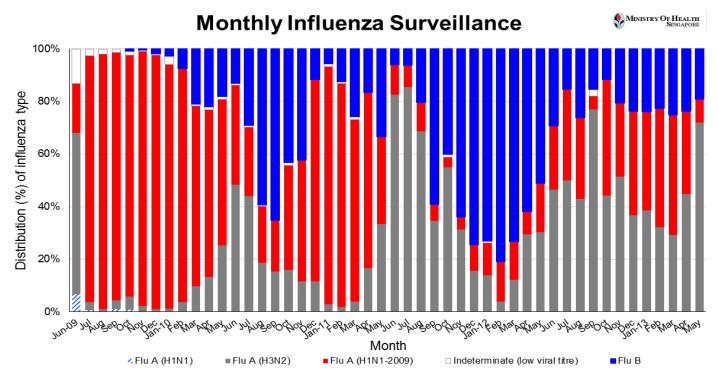

Influenza indicators for E-week 26 (23 - 29 Jun 2013) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI remained stable at 2,413 (over 5.5 working days) in E-week 26, compared to 2,755 (over 5.5 working days) in E-week 25.

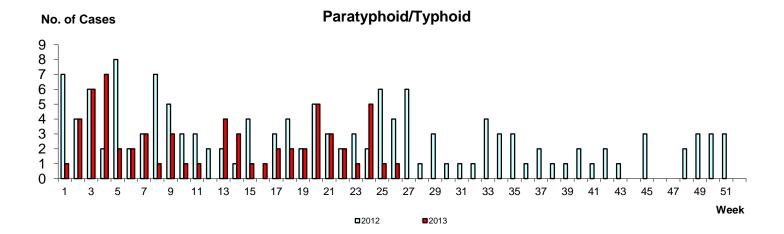

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 1%.

The overall prevalence of Influenza among ILI samples (n=146) in the community was 42.5% in the past 4 weeks. Of all the influenza virus isolates in May 2013, influenza A(H3N2), influenza A(H1N1-2009), and influenza B comprised 72.1%, 8.8% and 19.1% respectively.

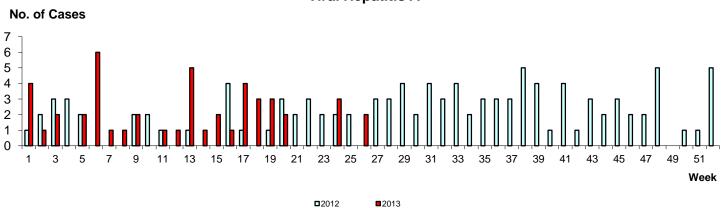

<sup>\*\*</sup> Based on influenza-like illness (ILI) samples from GPs and polyclinics
