#### Influenza Situation in Singapore 2016

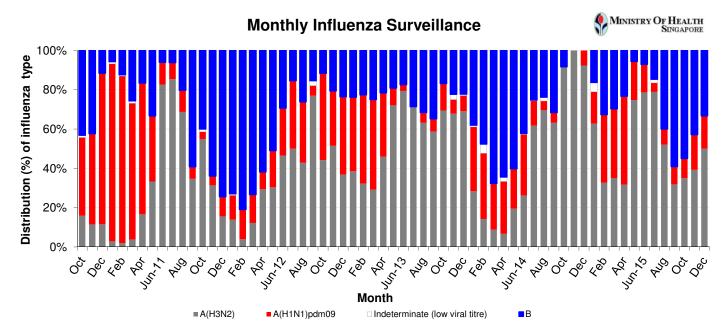

Influenza indicators for E-week 3 (17 - 23 Jan 2016) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI increased from 2,775 (over 5.5 working days) in E-week 2 to 2,946 (over 5.5 working days) in E-week 3.

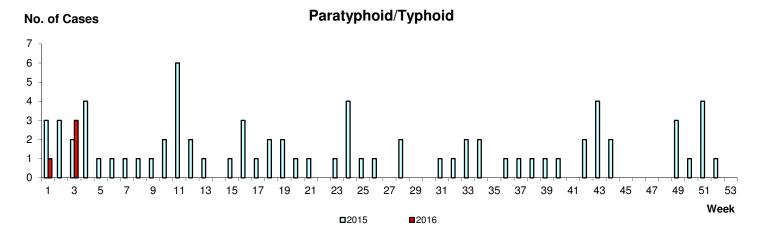

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at approximately 1%.

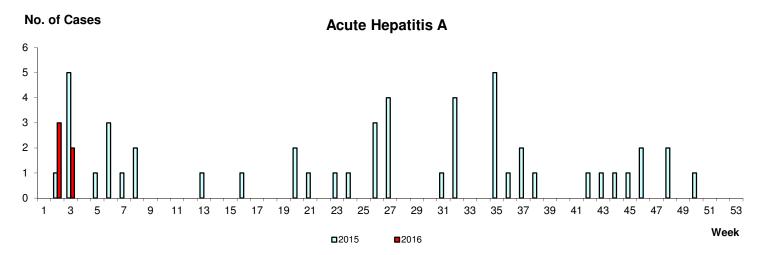

The overall prevalence of influenza among ILI samples (n=164) in the community was 62.2% in the past 4 weeks. Of the specimens tested positive for influenza in December 2015, these were positive for influenza A(H3N2) (50.0%), influenza B (33.3%), and influenza A (H1N1)pdm09 (16.7%).

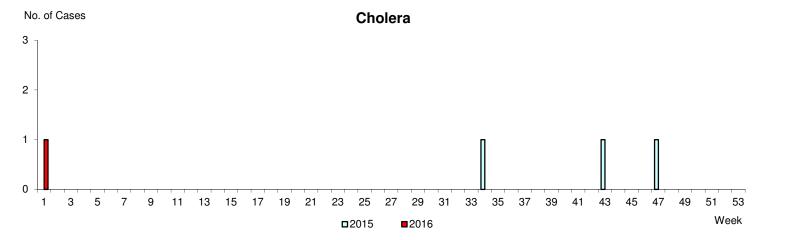

<sup>\*</sup> Based on influenza-like illness (ILI) samples from GPs and polyclinics
