Sentinel Provider Influenza-Like Illness (ILI)¹ Surveillance Summary (tn.gov/health/article/flu-summary-archive) for the Week of Oct. 23-29, 2016 (Week 43)

			Total	Total		
	# Sites	Total	Regional	Regional		Compared
Summary for	reporting	Sites	ILI	Patients	% ILI	to State ²
Hamilton County (Chattanooga)	2	4	0	471	0.0%	lower
East Tennessee Region	6	7	2	2299	0.1%	lower
Jackson-Madison County	1	1	45	586	7.7%	higher
Knoxville-Knox County	2	3	9	1195	0.8%	
Mid-Cumberland Region	5	11	1	845	0.1%	lower
Shelby County (Memphis)	8	12	62	1136	5.5%	higher
Nashville-Davidson County	3	7	7	786	0.9%	
Northeast Region	2	4	0	121	0.0%	
South Central Region	3	3	0	242	0.0%	
Southeast Region	4	5	0	417	0.0%	lower
Sullivan County (Tri-Cities)	1	1	0	392	0.0%	
Upper Cumberland Region	4	4	0	535	0.0%	
West Tennessee Region	6	6	0	361	0.0%	lower
State of Tennessee	47	68	126	9386	1.34%	

Influenza activity in Tennessee

- The percentage of outpatients with ILI visiting the state's Sentinel clinic sites was below the CDC's baseline rate of 2.1%.
- 0.6% of specimens tested positive for influenza viruses .
- 5 of 95 Tennessee counties have had at least one confirmed influenzapositive result in recent weeks.

The percentage of patients with ILI reported in Week 43 was 1.34% as compared to 1.57% in Week 42. Laboratory surveillance suggests the elevated ILI rate reported by the Jackson sentinel site is not due to influenza. To date, 335 specimens from Week 43 have been tested at TDH Laboratory Services and two commercial laboratories in Tennessee; two (0.6%) tested positive for A(H1N1). A map of counties with recent influenza-positive specimens is included.

SPN sites should submit specimens year-round from ALL patients meeting the ILI case definition: Fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Case definition is not dependent on any test. If you have questions, contact your regional or state SPN representative. The TDH specimen submission form dated September 2015 should be used.

Specimens are critical to be able to track the geographic spread and intensity of seasonal influenza viruses, to detect the emergence of novel virus and/or antiviral resistance and provide data for vaccine strain selections.

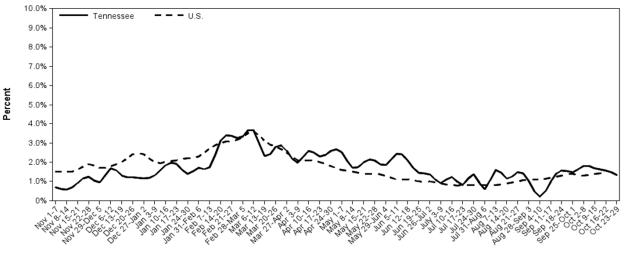

Respiratory Viral Panel

Number of Positive Specimens, by week

Month/Week	#	Flu A (H1N1)	Flu A (H3)	Unsub. Flu A	RSV B	Paraflu 2	Paraflu 3	Rhino	Meta- pneumo	Adeno B or E
October										
Current	335	2	0	0	0	1	0	1	0	0
42	293	1	0	0	0	0	0	1	0	0
41	278	2	0	0	0	1	0	0	0	0
40	289	0	0	1	2	0	1	6	1	0
September										
39	292	0	1	0	0	0	0	2	1	1
38	278	0	0	0	0	0	0	0	0	0

Percentage of Outpatient Visits Reported by the U.S. and Tennessee Outpatient Influenza-like Illness Surveillance Network (ILINet) as Influenza-like Illness, 2015-2016

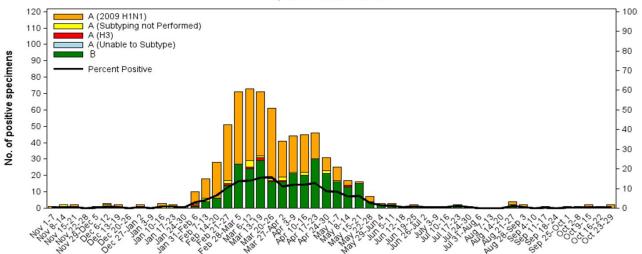

Updated: November 4, 2016

Week (Nov 1, 2015 - Oct 29, 2016)

Influenza Positive Tests Submitted to TN Dept. of Health Laboratory Services Tennessee, 2015-2016

Updated: November 4, 2016

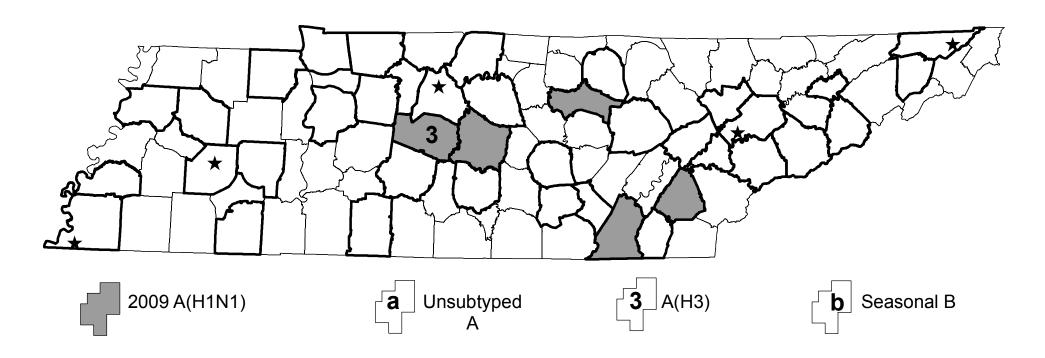

Week (Nov 1, 2015 - Oct 29, 2016)

Influenza Confirmed by Culture or PCR in Tennessee from Specimens Collected by Any Source within the Past 6 Weeks

September 18 through October 29, 2016

- Strains are reported by county of case residence.
- Counties where influenza sentinel providers are located are identified with bold boundary lines.
- Stars mark counties with large metropolitan populations (Memphis, Jackson, Nashville, Chattanooga, Knoxville, and the Tri-Cities area).

Note: TDH weekly laboratory surveillance for influenza includes PCR and culture results for Tennessee specimens submitted to two commercial laboratories serving outpatient clinics and hospitals statewide. These numbers are added to those from TDH Laboratory Services and help provide a picture of influenza activity areas of the state in which there are not Sentinel surveillance sites.

Reference Information for Sentinel Provider Network

1 Influenza-like illness (ILI) is defined as fever > 100°F (37.8°C) plus cough and/or sore throat, in the absence of a known cause (other than influenza). Classification of ILI is based upon symptoms only and does not require any test.

2 The % of patients with ILI seen in each region is compared to the statewide average. Regions with % statistically-significantly different from the state average are noted as "higher" or "lower." The CDC reports that the percentage of patients visiting outpatient healthcare providers in the Sentinel Provider Network (SPN) with influenza-like-illness (ILI) when influenza viruses are not circulating is expected to fall at or below a specific SPN baseline [nationwide = 2.2%, East South Central region (AL, TN, MS, KY) = 2.3%]. When the percentage of patients with ILI exceeds this baseline, this suggests that influenza viruses may be circulating.

Important information for Sentinel Providers

Sentinel Providers report ILI by the end of Wednesday following the end of the reporting week (https://wwwn.cdc.gov/ilinet/) and collect and ship specimens from ILI cases Monday through Thursday (maximum 10/week per provider). All Sentinel Provider specimens MUST be accompanied by the Influenza and Respiratory Viral Panel Submission form or testing will not be done. The Respiratory Viral Panel is only validated for nasopharyngeal (NP) specimens. Specimens collected from other sites cannot be tested.

Additional laboratory supplies can be obtained by completing the lab order supply form. To ensure the order is filled, please include the CDC Provider ID Code.
