^{***} Wef E-week 6 of 2012, the no. of polyclinic attendances will be reflected on an average daily basis, instead of weekly basis, so as to take into account the number of working days in an E-week at the polyclinics for a more accurate representation of the underlying trends in the community.

Influenza Situation in Singapore 2014

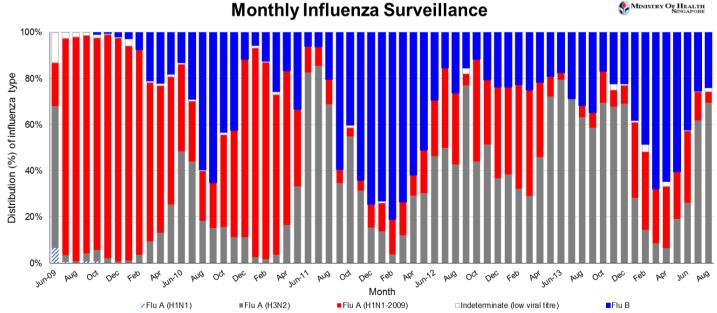

Influenza indicators for E-week 37 (7 September 2014 - 13 September 2014) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 2,517 (over 5.5 working days) in E-week 36 to 2,244 (over 5.5 working days) in E-week 37.

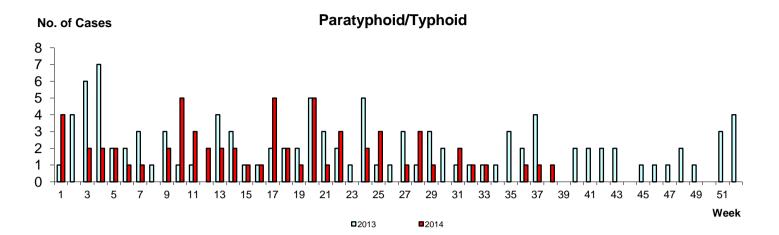

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 1%.

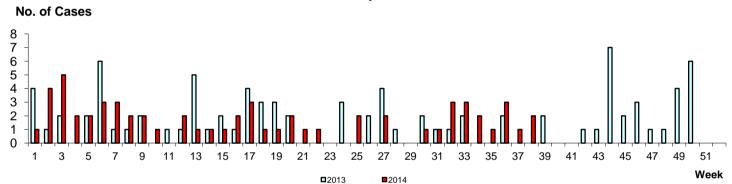

The overall prevalence of influenza among ILI samples (n=156) in the community was 36.5% in the past 4 weeks. Of all the influenza virus isolates in August 2014, influenza A(H3N2), influenza B and influenza A(H1N1-2009) comprised 69.5%, 23.8% and 4.8% respectively.
